

Модель ПВО: Перехват баллистической цели

$$\alpha := 60^\circ \quad f := 0.047 \quad x_{r0} := 15 \text{ км} \quad y_{r0} := 0 \text{ км} \quad d := 0.0762 \text{ м}$$

$$v_0 := 700 \frac{\text{м}}{\text{с}} \quad v_r := 350 \frac{\text{м}}{\text{с}} \quad \rho_{\text{air}}(h) := \frac{1.225 \text{ кг}}{\text{м}^3} \cdot \exp\left(\frac{-h}{8500 \text{ м}}\right)$$

$$m := 3 \text{ кг} \quad t_0 := 8 \text{ с} \quad t_{\text{end}} := 50 \text{ с} \quad N := 500 \quad s := \pi \cdot \left(\frac{d}{2}\right)^2$$

$$\text{dist}(t) := \begin{bmatrix} x(t) & y(t) \\ x_r(t) & y_r(t) \end{bmatrix} \cdot .001$$

Объединенная система дифференциальных уравнений (цель и ракета):

$$\left\{ \begin{array}{l} x''(t) = \frac{(-f) \cdot s}{m} \cdot \rho_{\text{air}}(y(t)) \cdot x'(t) \cdot |x'(t)| \\ y''(t) = -g_3 - \frac{f \cdot s}{m} \cdot \rho_{\text{air}}(y(t)) \cdot y'(t) \cdot |y'(t)| \\ x_r'(t) = \frac{v_r \cdot (x(t) - x_r(t)) \cdot (t - t_0 > 0)}{\sqrt{(x(t) - x_r(t))^2 + (y(t) - y_r(t))^2 + (0.1 \text{ м})^2}} \\ y_r'(t) = \frac{v_r \cdot (y(t) - y_r(t)) \cdot (t - t_0 > 0)}{\sqrt{(x(t) - x_r(t))^2 + (y(t) - y_r(t))^2 + (0.1 \text{ м})^2}} \end{array} \right. \quad \begin{array}{l} x(0 \text{ с}) = 0 \text{ м} \quad y(0 \text{ с}) = 0 \text{ м} \\ x'(0 \text{ с}) = v_0 \cdot \cos(\alpha) \\ y'(0 \text{ с}) = v_0 \cdot \sin(\alpha) \\ x_r(0 \text{ с}) = x_{r0} \\ y_r(0 \text{ с}) = y_{r0} \end{array}$$

$$M := \text{rkfixed} \left(\begin{array}{l} x(t) \\ y(t) \\ x_r(t) \\ y_r(t) \end{array}, t_{\text{end}}, \left[\begin{array}{l} \text{кг} := 1 \\ \text{м} := 1 \\ \text{с} := 1 \end{array} \right] \right)$$

Извлечение векторов для построения графика:

$$t_{\text{out}} := \text{col}(M, 1) \text{ с} \quad x_{r_{\text{out}}} := \text{col}(M, 6) \cdot .001$$

$$x_{\text{out}} := \text{col}(M, 2) \cdot .001 \quad y_{r_{\text{out}}} := \text{col}(M, 7) \cdot .001$$

$$y_{\text{out}} := \text{col}(M, 4) \cdot .001$$

$$t := [0, 5 \dots (N - 1)]$$

График траекторий (Синий - Цель, Красный - Ракета):

$$\left\{ \begin{array}{l} \text{submatrix}(\text{augment}(x_{\text{out}}, y_{\text{out}}), 1, t+1, 1, 2) \\ \text{submatrix}(\text{augment}(x_{r_{\text{out}}}, y_{r_{\text{out}}}), 1, t+1, 1, 2) \\ \text{dist}\left(\frac{t}{N-1} \cdot t_{\text{end}}\right) \end{array} \right.$$
