appVersion(4) = "1.0.8348.30405" appVersion(−4) = "1.0.8348.30405"

Define

$kNm := kN\ m$

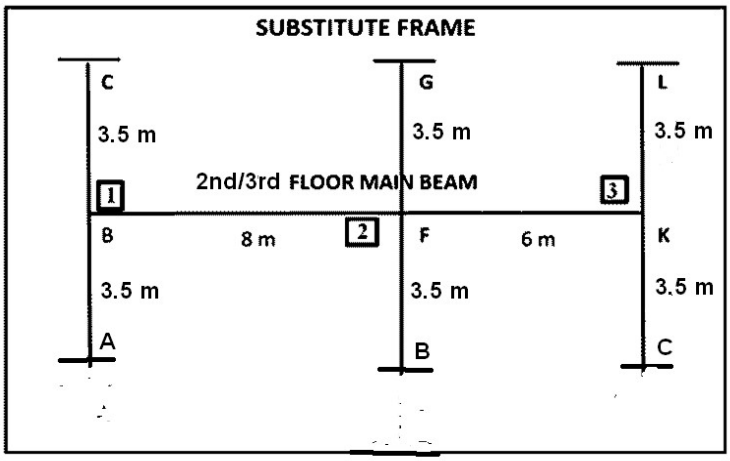
Assume

$E := 1\ MPa$

Assume Young's Modulus for RC: This is not really required, but used only for consistent units in intermediate calculations. We can use any numerical value. **Ex E = 1 MPa**

$t_0 := time(0)$

Desinged and Detailed (BS 8100: 1997) - Page 10 J.B. Higgins and B.R. Rogers (32 pages)
Published by: British Cement AssociationISBN 0 7210 154 1541 7 - Price Group E : British Cement Association 1988



All joints on 2nd and 3rd floors are fixed. Hence, FDN is defined as follows

$FDN := 1$

DATA

3 upper columns, 3 lower columns and 2 beams

Column

$$b_{UC} := \begin{bmatrix} 300 \\ 300 \\ 300 \end{bmatrix} mm \qquad h_{UC} := \begin{bmatrix} 300 \\ 300 \\ 300 \end{bmatrix} mm$$

$$b_{LC} := \begin{bmatrix} 300 \\ 300 \\ 300 \end{bmatrix} mm \qquad h_{LC} := \begin{bmatrix} 300 \\ 300 \\ 300 \end{bmatrix} mm$$

$$H_{UC} := \begin{bmatrix} 3.5 \\ 3.5 \\ 3.5 \end{bmatrix} m \qquad H_{LC} := \begin{bmatrix} 3.5 \\ 3.5 \\ 3.5 \end{bmatrix} m$$

Beam

$$b_{beam} := \begin{bmatrix} 300 \\ 300 \end{bmatrix} mm \qquad h_{beam} := \begin{bmatrix} 500 \\ 500 \end{bmatrix} mm \qquad L := \begin{bmatrix} 8 \\ 6 \end{bmatrix} m$$

Define

$kNm := kN\ m$

Assume

$E := 1\ MPa$

Flanged Beams can be effective only in case of sagging as the concrete is able to take compression. In limit state design we neglect the tensile strength of concrete. As a result, at supports, continuous **'T' beams should be designed as a rectangular beam *(with width equal to the web width)*.**

Defie

$$Line_{zero} := \begin{bmatrix} 0 & \sum \left(\frac{L}{m}\right) & 0 \end{bmatrix}$$

Define

$$LL_{[1..rows(L)]} := 0 = \begin{bmatrix} 0 \\ 0 \end{bmatrix}$$

Moment of Inertia

Upper Columna

$$I_{UC} := \overrightarrow{\frac{1}{12} \cdot b_{UC} \cdot \left(h_{UC}\right)^3} = \begin{bmatrix} 0.0007 \\ 0.0007 \\ 0.0007 \end{bmatrix} m^4$$

Lower Columna

$$I_{LC} := \overrightarrow{\frac{1}{12} \cdot b_{LC} \cdot \left(h_{LC}\right)^3} = \begin{bmatrix} 0.0007 \\ 0.0007 \\ 0.0007 \end{bmatrix} m^4$$

Beams

$$I_{beam} := \overrightarrow{\frac{1}{12} \cdot b_{beam} \cdot \left(h_{beam}\right)^3} = \begin{bmatrix} 0.0031 \\ 0.0031 \end{bmatrix} m^4$$

Foundation Columns Fixed at Base

Foundation Columns Fixed at Base

$FDN = 1$

Call Program 2 to find the Stiffness Matrix the Sustitute Frame

$$K1 := Find\_K\left(L, I_{UC}, I_{LC}, I_{beam}, H_{UC}, H_{LC}, FDN\right) = \begin{bmatrix} 3.1054 & 0.7812 & 0 \\ 0.7812 & 5.1887 & 1.0417 \\ 0 & 1.0417 & 3.6262 \end{bmatrix} kNm$$

Frames are spaced at 5 m

$S_{frame} := 5\ m$

$L_{building} := 36\ m$

$\gamma_{cu} := 24\ \frac{kN}{m^3}$

$slab_{thick} := 175\ mm$

Loadings

$finishes_{floor} := 0.5\ \frac{kN}{m^2}$

$q_{k\_floor} := 4.0\ \frac{kN}{m^2}$

2A. Self weights, Dead loads

Self Weight of Beam

$$W_{beam} := \left(h_{beam_1} - slab_{thick}\right) \cdot b_{beam_1} \cdot \gamma_{cu} = 2.34\ \frac{kN}{m}$$

D/L from Slab

$$W_{slab} := slab_{thick} \cdot \gamma_{cu} + finishes_{floor} = 4.7\ \frac{kN}{m^2}$$

Floors D/L

$$g_{k\_floor} := W_{slab} = 4.7\ \frac{kN}{m^2}$$

2B. Design Loads on Beams

Dead load

$$G_{k\_floor} := g_{k\_floor} \cdot S_{frame} + W_{beam} = 25.84\ \frac{kN}{m}$$

Imposed loadd

$$Q_{k\_floor} := q_{k\_floor} \cdot S_{frame} = 20\ \frac{kN}{m}$$

Max Design Load

$$F1 := 1.4 \cdot G_{k\_floor} + 1.6 \cdot Q_{k\_floor} = 68.18\ \frac{kN}{m}$$

Min Design Load

$$F2 := 1.0 \cdot G_{k\_floor} = 25.84\ \frac{kN}{m}$$

Define Load Patterns for All 4 Cases

Case I Case II Case III

$$FF := \left[\begin{bmatrix} F1 \\ F1 \end{bmatrix} \begin{bmatrix} F1 \\ F2 \end{bmatrix} \begin{bmatrix} F2 \\ F1 \end{bmatrix}\right] = \left[\begin{bmatrix} 68.18 \\ 68.18 \end{bmatrix} \begin{bmatrix} 68.18 \\ 25.84 \end{bmatrix} \begin{bmatrix} 25.84 \\ 68.18 \end{bmatrix}\right] \frac{kN}{m}$$

3 load cases **have been considered in this example**

Call Program 7 to find support moments, upper & lower column moments

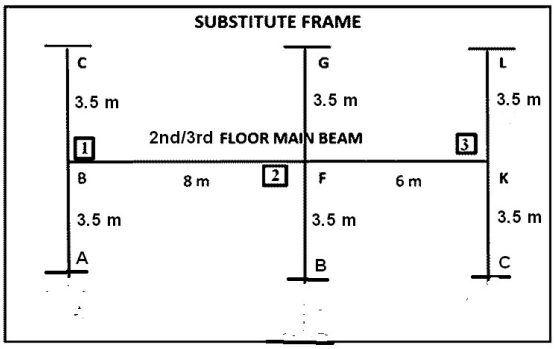
$$M_{all} := NEW\_BMM\left(FF, K1, H_{UC}, H_{LC}, I_{beam}, I_{UC}, I_{LC}, FDN, L\right)$$

$FDN = 1$

Upper Col | Lower Col

$$M_{all} = \begin{bmatrix} [-196.5\ 399.3] & [-336.2\ 68.9] & \begin{bmatrix} 98.3 \\ -31.5 \\ -34.5 \end{bmatrix} & \begin{bmatrix} 98.3 \\ -31.5 \\ -34.5 \end{bmatrix} \\ [-210\ 351.7] & [-234.9\ -0.6] & \begin{bmatrix} 105 \\ -58.4 \\ 0.3 \end{bmatrix} & \begin{bmatrix} 105 \\ -58.4 \\ 0.3 \end{bmatrix} \\ [-61\ 198.9] & [-228.8\ 95.6] & \begin{bmatrix} 30.5 \\ 14.9 \\ -47.8 \end{bmatrix} & \begin{bmatrix} 30.5 \\ 14.9 \\ -47.8 \end{bmatrix} \end{bmatrix} kNm$$

Foundation Columns Fixed at Base



Get Column Moments

$\texttt{time}(0) - t_0 = 0.7\ \texttt{s}$

Plotting Column Moments Unlike BMD and SFD, plotting Column Moments is reatively difficult, The main reason is that both Column Moments and the Column locations have to be plotted on the X-azis. Hence, Column moment values are

divided by total length of the horizontal beams. Then these values are converted to strings and plotted at the proper locations for both upper and lower columns.

Upper Lower

$$M_{col} = \begin{bmatrix} \begin{bmatrix} 98.3 \\ -31.5 \\ -34.5 \end{bmatrix} & \begin{bmatrix} 98.3 \\ -31.5 \\ -34.5 \end{bmatrix} \\ \begin{bmatrix} 105 \\ -58.4 \\ 0.3 \end{bmatrix} & \begin{bmatrix} 105 \\ -58.4 \\ 0.3 \end{bmatrix} \\ \begin{bmatrix} 30.5 \\ 14.9 \\ -47.8 \end{bmatrix} & \begin{bmatrix} 30.5 \\ 14.9 \\ -47.8 \end{bmatrix} \end{bmatrix} kNm$$

Define $Col\_Case := [1..cols(FF)] = \begin{bmatrix} 1 \\ 2 \\ 3 \end{bmatrix}$

Number of Columns

$N_{cols} := rows(L) + 1 = 3$

◉ 1 ○ 2 ○ 3

$nn3$

$nn3 = 1$

$Max_{col\_top} := Max\left(Max\_Abs\left(col\left(M_{col}, 1\right)\right)\right) = 105\ kNm$

$Min_{col\_top} := Min\left(Min\_Abs\left(col\left(M_{col}, 1\right)\right)\right) = 0.3\ kNm$

$Max_{col\_bot} := Max\left(Max\_Abs\left(col\left(M_{col}, 2\right)\right)\right) = 105\ kNm$

$Min_{col\_bot} := Min\left(Min\_Abs\left(col\left(M_{col}, 2\right)\right)\right) = 0.3\ kNm$

Scale to plot column moments

$$SC := round\left(\frac{Max_{col\_top}}{Max_{col\_bot}}, 1\right) = 1$$

Note: In CASES 1 & 2, the column moments at joint 1 are large compared to CASE 3. Hence. the plot will looks odd, and to avoid such a situation, a SCALE is arbitrarily introduced in PLOTTING the column moments

However, above valued of SC is too small, and will distort the PLOT.
Hence, change it with trial and error.

$SC := 2$
